# CPSY 202 - User Experience and Design

**Description**
This course introduces the fundamentals of designing user interfaces for software applications, with a focus on producing end products that are functional and are designed from a user perspective. Topics include usability engineering, human-computer interface design standards, screen mock-ups, documentation and prototype creation. Information gathering and user interview techniques are also emphasized.

3 Credits

**Time Guidelines**
The standard instructional time for this course is 60 hours.

**Course Assessment**

| | |
|---|---|
| Assignments | 40% |
| Project(s) | 60% |
| Total: | 100% |

Use of Turnitin

The instructor may submit student work in this course to Turnitin's text-matching software program, to help assess the academic integrity of student work in this course. Turnitin results may be considered as one piece of evidence in academic misconduct hearings. Turnitin is an American company that keeps no unencrypted student identity data in the United States unless the students themselves choose to share this information in their submission. Students should limit their sharing of personally identifiable information by not including their names and student ID numbers within the text body of submitted assignments. SAIT has carefully reviewed this company's data management procedures.

**Other Course Information**
**Learner Engagement:**

In order to be successful, the learner is expected to be engaged in learning activities for a total of 9 to 12 learning hours per course per week, which includes both in-class and out-of-class time.

**Course Learning Outcomes**
1. Explain the principles of UX Design and its process in software development.

    Objectives:

    1.1 Outline the characteristics of good design and features of faulty design.

    1.2 List the usability heuristics and their relevance to UX design.

1.3 Outline the features of an industry standard UX design framework.

1.4 Evaluate a design on the basis of heuristics and alignment to a design framework.

1.5 Define a user in terms of UX design.

1.6 List the common stakeholders considered during a UX design process.

1.7 Describe how users influence the design process and the relationship between UX design and software end users.

1.8 Explain the problem analysis process, the iterative nature of UX design, and the role of major milestones and continuous feedback in the design process.

2. Apply industry best practices for user needs analysis.

Objectives:

2.1 Explain the importance of designing to user needs.

2.2 Describe the process of Requirements elicitation.

2.3 Explain the role of requirements elicitation in ensuring a successful design.

2.4 Perform requirements elicitation to industry standards.

2.5 Define the user's current state based on information gathered.

3. Apply principles of designing effective interfaces.

Objectives:

3.1 Outline the features of an interface.

3.2 Outline the common types of UX design elements and formatting

3.3 Explain the role of color and contrast in interface design.

3.4 Integrate accessibility considerations and usability heuristics

4. Construct a high-fidelity prototype of a software interface.

Objectives:

4.1 Compare approaches to prototyping.

4.2 Describe the iterative process of prototyping (lo, medium and high fi stages of prototyping).

4.3 Explain the importance of constraints at each fidelity level during prototyping.

4.4 Develop a lo-fi, a medium-fi and a hi-fi prototype collaboratively.

4.5 Summarize project work for stakeholder communication.

4.6 Demonstrate self-direction using team governing documents.

5. Recommend improvements to a UX design project.

Objectives:

5.1 Reflect on areas of effectiveness in a UX design project.

5.2 Identify project shortcomings.

5.3 Recommend a future course of action that addresses project shortcomings.

**SAIT Policies and Procedures:**
Students should familiarize themselves with SAIT's Policies and Procedures, including but not limited to those in the Academic Student, Conduct, and Health, Safety, and Environment domains.
